PARIS UNIVERSAL EXHIBITION, 1867.

Meetings of the intending metropolitan exhibitors in classes 18, 20, 29, 30, 33, 34 and 40, have taken place at the Society's house during the past week, and sub-committees have been appointed for the allotment of space amongst the claimants in each class.

PARIS ANNUAL EXHIBITION OF WORKS OF ART.—The doors of this exhibition have been closed, according to custom, for four days, in order to make certain changes in the disposition of the pictures, and to mark the works for which medals have been awarded. The doors will now remain open until the 20th instant. In the meantime the list of awards have been published, and includes amongst others the name of M. Robert-Fleury, jun., whose picture, "Warsaw in 1861," was named especially in the notice of the exhibition which appeared in the *Journal* of the 18th of May; the painters of the other works there named are, we believe, *hors concours*—that is to say, they have already received three medals. The son of Meissonier is also among the medallists. The first ballot for the award of the two medals of honour has taken place without any result. Of the 506 artists entitled to vote 197 exercised the privilege, and of these 39 deposited blank papers, which means that in the opinion of the voters no artist was worthy of one of the greater prizes; the highest number of votes given in favour of an exhibitor was 28. As in no case was a majority obtained, the vote has to be taken again, and, if necessary, a third time. The ten artists who obtained the largest number of votes are as follows:—Bonnat, Carpeaux (sculptor), Emile Lévy, Auguste Bonheur, T. Robert-Fleury (mentioned above), Corot and Fromentin (the well-known landscape painters), Edouard Dubufe,

Gumery (sculptor), and Gérôme. The second ballot is on this list, and should that not be decisive the third will be for choice of two out of the three highest in the second trial. The working of liberal arrangements such as this voting of the medals of honour by the whole body of medalled and exhibiting artists is highly interesting and instructive as a study. It has been said that only 197, out of a body of 506, recorded their votes, but it must be remembered that to do so each was obliged to attend personally at the exhibition building in the day-time, when the hours are precious to an artist; besides, very many artists live at great distances from the centre of Paris, and not a few at Versailles, Fontainebleau, and even more distant places; perhaps, therefore, the attendance of very nearly two-fifths of the whole entitled to vote was as much as could be fairly expected. As regards the result of the first ballot, it may be said that, with very few exceptions only, the artists placed at the head of the poll would, doubtless, have been in the same position, or nearly so, had the voters belonged to any other section of the artistic or critical world; there are, however, two or three names low down in the list, whose position is not in accordance with the opinion of a large section of the art-world of Paris.

Notes.

RENDERING NITROGLYCERINE NON-EXPLOSIVE.—The *Mining Journal* states that, practically, there is no greater difficulty in rendering nitroglycerine non-explosive and explosive at pleasure, than there is in accomplishing the same feat with gunpowder, although the means employed are, of course, dissimilar. The recent accidents with the new explosive agents have induced Mr. Nobel to turn his attention seriously to the subject, and he is now enabled to state that by mixing the nitroglycerine with methylic alcohol, a cheap spirit, popularly known as spirit of wood, the nitroglycerine is rendered unexplosive, either by percussion or heat. When required for use water is added, which absorbs the spirit, and the oil sinks to the bottom of the vessel, whence it is drawn by a syphon, and its explosive nature thereupon found to be restored. Experiments for testing the value of this discovery are said to have already been made in America with satisfactory results. The subject is one of the greatest importance to miners.

TUNNEL BETWEEN ENGLAND AND FRANCE.—M. Thomé de Gamond proposes the construction of a submarine railway across the channel, and to form four tunnels for this purpose. He has given up his original scheme of forming artificial islands for protecting the air-shafts as too expensive. It is said that the attempt to construct this railway will really be made; surveys are actually making at Boulogne, and the plans in relief will be shown at the Paris exhibition next year.

IRON OXIDE PAINT.—SIR,—In the last number of the *Journal* mention is made of "oxide of iron paint." Allow me to observe that my firm (Blundell, Spence, and Co.) has for upwards of a quarter of a century manufactured oxide of iron paint, and recommended it for the purpose of protecting iron and other materials. No doubt, if engineers and iron ship-builders were as well versed in chemistry as they are in mechanics, oxide of iron paint would be much more extensively used for protecting iron than it has hitherto been.—I am, &c., G. D. LONGSTAFF.
